ANALYTICAL REPORT

Bio-Strath AG
Mr. Alfred Habegger
Mühlebachstrasse 25
CH-8032 Zürich

Order No. : 0807-00345
Receipt : 15. July 2008
State at receipt : o.k.
Responding person: R. Camenzind

Sample-No.	Sample	GMO
256447	Strath Aufbautabletten à 100 St. Charge 07089A	n.d. ^{a)}

The following method(s) were applied for the detection of GMO's (genetically modified organisms):

- detection of plant specific Chloroplast Gene (Taberlet *et al.*, 1991)
- Swiss screening method for the detection of CaMV35S-Promotor (Pietsch *et al.* 1997)
(limit of determination ca. 0.1 %)
- Sensitive screening methods for the detection of CaMV35S-Promotor and nos-Terminator
(limit of determination ca. 0.01 %)

Remark

^{a)} In a sample of 5 g no plant DNA could be detected.

Belp, 18. July 2008

J.V. S. Buh
Marianne Schluchter, Analyst

Legend: <: less than >: more than n.d.: not detectable, less than limit of detection LD: Limit of detection
DM: Dry Matter cfu: colony forming units A value after "<" is the LD of the corresponding method.

The scope of the accreditation is described in the official directory of accredited laboratories (www.sas.ch). The results in this report relate only to the items tested. For conformity to the Swiss GMP Guideline, a quality agreement for contract laboratory work is necessary for each product. The method is continuously monitored by the Interlabor Quality Management Program. Further parameters and the uncertainty of the method are available upon request. Examinations marked with an asterisk (*) are not covered by the scope of the accreditation. This report may be forwarded only complete and unaltered.
